2000 Purpose, Scope, Distribution and Reference Documents

Purpose and Scope

This Quality Manual contains references to the policies and procedures within the quality management system. Policies, defined in this document apply to products manufactured at our facility and the same policies are flowed down to our supply chain. Any deviations from this QMS must be submitted to the Management Representative and approved before proceeding. This document shall not be interpreted to conflict with requirements specified by customer, regulatory or statutory requirements.

The Quality Assurance Program for MST is designed to meet the requirements of AS9100:2016 D and ISO9001:2015 for:

***"The Manufacture and Contract Machining of products for the Aviation,
Automotive and Energy Industries"***

Distribution

The Management Representative is responsible for control and distribution of this manual and all other controlled documentation within the quality management system. This document is uncontrolled when printed. The latest revision of this document is located in a controlled file on a main MST computer or server. Users shall verify the latest revision before use. Contact the Management Representative for questions related to this manual. Minor corrections (typographical errors and clarifications) are not considered a change therefore change in revision status is not required.

Exclusions

MST excludes Section 8.3, Design and Development of Products and Services requirements of the AS9100:2016 D and ISO9001:2015 Standards. MST provides manufacturing services to our customer base and does not offer a design service.

MST Quality Policy:

MST is dedicated to being the benchmark for Superior Customer Service. We will extend every possible effort to exceed our customers' expectations for workmanship, timely deliveries and continual improvement strategies while producing and delivering competitively priced, high-quality products.

MST, Building Relationships that last...

Overview of Quality Management System (QMS)

This manual defines and standardizes the appropriate procedures and documented processes that MST uses to operate the quality management system in accordance with previously outlined standards of AS9100:2016 D and ISO9001:2015. It defines QMS processes, documents and records needed to provide evidence of customer satisfaction and compliance. MST produces safe, reliable products that meet or exceed customer and applicable statutory and regulatory requirements. MST also provides customer and regulatory authorities' access to quality management system documentation. The intent of this manual is to improve quality, schedule, cost and overall performance.

The overall QMS process is a definition of management responsibility, resource management, production and supporting processes, and activities for measurement and analysis. These are captured in identifiable and number traceable documents listed in this manual.

The Organization Chart defines Top Management and or Executive support for the various departments. Quality Process Maps depict each process, its application, sequence and interaction.

Criterion and methods are defined in these processes to ensure operations within a process are controlled, monitored, and effective. Resources and information are defined and available to support each process. Where applicable, processes are monitored and measured. Necessary actions are implemented when planned results are not achieved to promote continual improvement of processing.

Processes are managed in accordance with the AS9100 D and ISO9001 standards. Outsourced processes, which affect product conformity to requirements, are controlled. Type and extent of control is defined in our purchase orders and supplier quality manual.
